Central Air Conditioning Maintenance

Fluctuating temperatures in the Summer season can be hard on your Central AC unit. Here are some tips to help ensure you get the best efficiency possible. Tip #1, Rent a new Energy Star Qualified unit from Enersure, whereby, you're always in warranty, you never pay for service (ensuring peak efficiency)... *For less than you might think!*

Here are some more Cool Tips:

Routine maintenance such as hanging filters can be handled by most homeowners, but others require professional service.

It's a good idea to brush dirt and obstructions from the coils and the drains at the start of each cooling season. Depending on the system and the homeowners, this may require a service call from a professional.

If your system is not producing as much cold air as is normal, it could also be an indication of a refrigerant charge or airflow problems. These problems may require service as well.
